DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled " Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities: Appropriate headings for the various sections of the specification should be provided for.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2817

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 6,9,10,11,13 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Sanders et al(US 6,091,356).

The reference by Sanders et al discloses a PLL synthesizer, see figure 1, and figure 7; figure 1 showing the VCO(10), means for generating a first swept waveform(ramp circuit 11), means for modulating the VCO with the waveform(line input 8 and drive circuit 23), a reference source (30), a PLL(22) which comprises a PFD discriminator, see col. 7, lines 50-56, with regards phase detection, and figure 7, showing the frequency error signal output from the PLL, thus both phase and frequency error discriminated. A linearised IF signal, including prescaler(frequency divider,18) and feedback path(14,16,20) , is coupled to the PLL with PFD(22) discriminator. Figure 7, shows the summer(154). The method steps being inherent to such an apparatus.

Allowable Subject Matter

6. Claims 7,8, and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
